OppRadar - Software Requirements Specification (SRS)

Status: placeholder. Replace with the real SRS export.

1. Overview

OppRadar ingests opportunities (internships, jobs, scholarships, competitions, bootcamps), checks them for scams, matches them to user CVs, and answers questions about them through a chat assistant.

2. Actors

- Visitor: browses and searches opportunities.
- Registered user: uploads a CV, gets matches, chats with the assistant.
- Admin: manages sources, reviews flagged (scam) entries.

3. Functional requirements

FR1 Ingest opportunities from configured sources on a schedule.
FR2 Extract structured fields (title, org, deadline, type...).
FR3 De-duplicate and score scam risk for every opportunity.
FR4 Parse an uploaded CV into a structured profile.
FR5 Rank opportunities per profile with explanations.
FR6 Answer user questions grounded in real, indexed opportunities.
FR7 Real-time progress updates over WebSocket.

4. Non-functional requirements

NFR1 Answers must cite only indexed opportunities (no hallucination).
NFR2 Secrets live only in environment variables, never in the repo.
NFR3 Users see only their own data (Postgres row-level security).
NFR4 Ingestion failures are isolated per source.
